

BUG

Getting media from a home/hosted server too slow!

Solution:

SmartSuite

P2P application that enables ready access to of your audio/video/images anywhere, easily.

Effects

- - More sharing of content
- More collaboration in editing, changing content.
- Larger collections of media
- Higher incentive to collect disparate types of media
- Greater exposure to different types of media; increasing globalism
- -Decline in commercial printing, increase in at-home printing (photos/newspapers, etc).
- -Collaborative revisions on business documents, simultaneous edits.

idSense

- ID device which configures your own personalized desktop setup on any machine you use.

Effects

- Interfaces become interchangeable
- More equitable dispersion of access to the network.
- Shared media available to everyone
- Personal environments can overlap and components of it can be shared
- Greater community organization around higher-end interface accessibility
 - Potentially greater possibility of theft/hacking if device is lost.
